Medicated for growing meat goats and show goats. For the prevention of coccidiosis caused by *Eimeria crandallis*, *E. christenseni* and *E. ninakohlyakimovae*.

Active Drug Ingredient: Monensin 20 g/ton

FEEDING DIRECTIONS

Feed N-Timidator® Goat Ration R20 at a rate of 2.5 to 5.0 lbs. per head per day. If additional roughage is necessary, feed high quality hay or pasture. Have fresh, clean water available at all times.

Caution:

Do not allow horses or other equines access to feeds containing Monensin. Ingestion of Monensin by horses has been fatal. Feeding undiluted or mixing errors resulting in high concentrations of Monensin has been fatal in cattle and could be fatal in goats. Monensin-medicated feed is intended for use in cattle or in goats. Consumption by unapproved species may result in toxic reaction. Do not feed to lactating goats.

N-Timidator® Goat Ration R20 is intended for all stages of goat production, **except lactation**. Kids should be fed N-Timidator® Goat Ration R20 starting at 45 days of age as a creep feed. Intake will be approximately 0.25 to 0.5 lb per head per day about 60 days of age when intake should approximately be 0.5 to 0.75 lb per head per day. Once weaned at 90 days of age, intake of N-Timidator® Goat Ration R20 should be approximately 2 lb per head per day.

Weaned bucks can be group fed while consumption is 2.5 to 3 lb N-Timidator® Goat Ration R20. Once voluntary consumption exceeds 3 lb per head per day, goats should be hand-fed to control body condition. Target intake is 5 lb N-Timidator® Goat Ration R20 per head per day by 4.5 months of age. Mature bucks may only eat 2.5 to 3 lb of N-Timidator® Goat Ration R20 during rut, but will otherwise eat up to 5% of their bodyweight in total feed. Maximum feeding rate of N-Timidator® Goat Ration R20 is 5 lb per head per day.

Does should be consuming 2 lb N-Timidator® Goat Ration R20 at weaning. Consumption of N-Timidator® Goat Ration R20 should be 2.5 to 3 lb per head per day from weaning until 7 months of age. Does should be fed 2 lb N-Timidator® Goat Ration R20 from 7 months of age until 10 months of age to prevent over-conditioning. From 10 to 11 months of age, does should be fed 3.5 lb of N-Timidator® Goat Ration R20 in preparation for kidding. In the last month prior to kidding, consumption of all feedstuffs will decrease due to reduced rumen volume as the pregnancy comes to term.

Mature does should be fed 2.5 to 3 lb N-Timidator® Goat Ration R20 during gestation.

Do not feed N-Timidator® Goat Ration R20 to lactating does.

Fresh, clean water and salt should be available at all times. Good quality forage should be fed to appetite.

Reminder:

Feed is perishable and should be stored in a clean, dry, well-ventilated area so it will remain fresh and palatable. DO NOT feed moldy or insect infested feed to animals as it may cause illness, abortion or death.
